

ADDITIONAL FEES:

Submitted herewith is a check in the amount of \$138.00 to cover the additional fee for one (1) extra independent claim and three (3) claims in excess of twenty total. Should it be determined that a further fee is due, authorization is hereby given to charge any such fee to our Deposit Account No. 01-0268.

REMARKS

The present application is a Rule 114 Request for Continued Examination (RCE) of parent application Serial No. 09/712,574, filed November 14, 2000. In the parent application, applicants submitted by facsimile on June 10, 2003 an amendment after final amending independent claims 1, 8 and 15 to further clarify the manner of communication between the first wireless communicator, the second wireless communicator, and a base station, amending claims 3 and 18 to conform to the amendments to claims 1 and 15, respectively, by changing "external device" to "base station", and adding new dependent claims 26 and 27 to specify the type of communication between the first and second wireless communicators.

In an Advisory Action dated June 15, 2003, the Examiner denied entry of the amendment after final because the amendments to claims 1, 8 and 15 raised new issues requiring further search and consideration. The present RCE is being filed to obtain entry of the non-entered amendment after final and examination of the amended claims.

Additionally, pursuant to 37 CFR §1.114, applicants submit the present preliminarily amendment submitting new claims 28-32 to obtain a fuller scope of coverage.

Applicants respectfully submit that the prior art of record does not disclose or suggest the subject matter recited in newly added claims 28-32. For example, Panasik discloses a wireless network in which calculators 36, 38 transmit wireless signals between one another through a distributed antenna system 40. Stated otherwise, in Panasik communication is made between calculators 36 and 38 only.

In contrast, new independent claim 28 recites a first information processing device having a first wireless communicator for communicating with a base station by short-distance wireless communication to receive and send data information from and to the base station and a display for displaying data information, and a second information processing device having a second wireless communicator for communicating with the first wireless communicator by short-distance wireless communication to receive and send data

information from and to the first wireless communicator, the
second information processing device having a display for
displaying data information corresponding to the data
information displayed by the display of the first information
processing device when the first wireless communicator is
communicating with the base station. No corresponding
structural combination and functions are disclosed or
suggested by Panasik.

New claims 29-32 depend on and contain all of the
limitations of independent claim 28 and, therefore,
distinguish from the prior art of record at least in the same
manner as claim 28.

In view of the foregoing amendments and discussion,
and in view of the amendments and arguments presented in the
June 10, 2003 amendment after final, the application is
believed to be in allowable form. Accordingly, favorable
reconsideration and allowance of the claims are most
respectfully requested.

Respectfully submitted,
ADAMS & WILKS
